

## About Kazu Komoto

Kazu Komoto is an expert in robotics and mobile technology. During his graduate study at Kyoto University (one of the top university in Japan), he was involved in the research about human-computer interaction, autonomous driving and computer vision. Then he spent several years in Arthur D. Little, a world-leading management consulting and innovation firm. He mainly supported new business development and M&A strategy in various industries such as the automobile, electronics, robotics, material and so forth. He moved to San Francisco in 2015, then joined the founding class of two-year program in Make School, a Y Combinator backed Edutech startup. He works for the development of mobile/web app utilizing robotics technology and the support for a robotics startup. He won several award of global business competitions and hackathon including AT&T's Smart City Hackathon in 2015.
